Assigning What’s New events to Cochrane Reviews

What are 'What's new' events?

'What's new' events in the Dates and events section in Review Manager (RevMan) become the version history of a protocol or review when it is published on the Cochrane Library.

'What's new events' can be added by authors but should be reviewed by editors before publication.

See Dates and events in RevMan Knowledge Base for background, general rules, and key implementation information for editors and authors.

Withdrawn articles

The withdrawal of a published Cochrane review or protocol automatically creates a new citation version. To withdraw, see the policy, guidance, and process.
