

Translate and record Cochrane podcasts

Introduction

Cochrane podcasts summarise Cochrane Reviews in an audio format. People can listen to podcasts on cochrane.org or iTunes. Podcasts can also be downloaded, so people can listen to them offline. You can search and browse Cochrane podcasts on [cochrane.org](http://www.cochrane.org/podcasts/) here: <http://www.cochrane.org/podcasts/>.

Each podcast webpage consists of:

- the main audio summary of the Review,
- an audio 'top' and 'tail', which is the introduction and ending of the podcast, and
- a brief introductory text, taken from the audio 'top', which is displayed on the webpage along with the podcast.

How to start translating podcasts

Podcasts can be translated and recorded in any language. The process includes two main steps:

- Translating the English transcript, and
- Recording the audio version in your language.

Translation teams who regularly translate podcasts into their language, can find a list of [available podcasts on this page](#), or check <http://www.cochrane.org/podcasts/>. New podcasts are also shared via the [Communications Network digest](#) on a weekly basis. You can find a copy of the transcript on each English podcast page on [cochrane.org](http://www.cochrane.org) (for podcast published since April 2016), when you click on the "Read transcript" button, see screen shot below, and an example here: <http://www.cochrane.org/podcasts/10.1002/14651858.CD012700>. If you cannot find a script that you are looking for, please contact Paolo Rosati (prosati@cochrane.org) so he can send you the English transcript, if available.

If you (translation team) want to translate a podcast for the first time, please contact Judith Deppe (jdeppe@cochrane.org) before you start.

Podcast: Aerobic exercise for adults with fibromyalgia

The Cochrane Musculoskeletal Group is producing a series of reviews of exercise interventions for people with the painful condition, fibromyalgia. One of these, published in June 2017, examines the effects of aerobic exercise training. In this podcast, Hayley Hassan, on behalf of the authors, describes the findings.

Translating the podcast script

- **Check if the Plain Language Summary or Abstract related to the podcast have already been translated into your language**, and take a look at it to ensure translations are consistent in terms of wording.
- The English transcript is usually recorded by one of the authors of the Review, so is written in the first person, using 'I', 'we' and 'our' pronouns. **For a translated podcast, the script should be translated in the third person, if the person doing the recording was not one of the Review authors.** It should be clear that it is a translation, and that the speaker is not the person who conducted the research. For example, any mention of 'our Review' and 'our results' should be modified to 'the Review' and 'the results'.
- In the introductory text, the sentence mentioning the speaker and their affiliation should be removed, and replaced with the name and affiliation of the new speaker. If the new speaker is not an author of the Review, adapt the text to say who translated and recorded the podcast, for example: 'Andrea Cervera from Cochrane Iberoamérica translated and recorded this podcast.' The same applies to any mentions of the author or speaker in the audio 'top'.

Recording the podcast

- The English script is set out for two speakers: one who records the 'top' and 'tail', and another one who records the Review summary. If you cannot find a second speaker, it is fine for one person to record the whole translated podcast. But please make sure to adapt the podcast script accordingly to one speaker only, so that it makes sense.
- You can record the audio file yourself using your computer, tablet or smartphone:
 - If you have a Windows PC you can use the 'Voice recorder' app in Windows 10. It is under *Programs > Accessories*, and it allows you to save the file in WMA format.
 - If you have a Mac, you can do the recording using the 'Garage Band' app.
 - Alternatively, you can use an online voice recorder, e.g. <https://online-voice-recorder.com>, or an app on your tablet or smartphone.
 - The quality of the recording should be acceptable with any of these apps or devices, but please make sure to avoid background noise and to use a reasonably good microphone.
- Alternatively, you can arrange a Skype call with Paolo Rosati (prosati@cochrane.org), who can record you while you are reading the podcast during a call.

Publishing the podcast

When you have translated the script and webpage introduction, and recorded the podcast, please send all of the below to Paolo Rosati (prosati@cochrane.org):

- The translated title of the podcast.
- The introductory text that appears on the cochrane.org webpage in your language. Make sure you have added a line at the end that says 'This podcast was translated and recorded by...' to be clear it is a translated version, and remove any mention of the original speakers or authors as needed.
- A final version of the written transcript, including top and tail, in your language.
- The audio file of your recording.
- Optionally, a picture of the person who recorded the podcast. The size of the photo should be no larger than 160 pixels wide by 160 pixels tall, ideally in portrait layout, and saved in JPEG format.

What happens if a Review with a podcast is updated?

Whenever a Review with a podcast is updated, an invitation is sent to the authors of the updated Review to ask them whether a new podcast is required.

- If yes, then the authors produce a new podcast and the regular procedure is followed. Old English and translated versions of the podcast are unpublished.
- If not, because the update was minor, then the existing podcast and its translations are linked to the updated version and its publication date is updated, too.
- If not, because the authors do not wish to record an updated podcast, the previous podcast and its translations are removed from cochrane.org.
