

Add custom tags

1. In the web editor, go to the menu in the left-hand corner, then click **Edit > Tags** and select “**Expand tags**”. This will make it easier to apply Custom tags.

2. In the Target segment, click into the position where you would like to add the custom tag in the text, then go to **Edit > Tags**, and select “**Create custom paired tag**”.

3. The tag will be inserted where you put your cursor before, and a small pop-up opens where you need to enter for example **<italic>** for italics - it is important that you enter the tag text exactly like that, in small letters. Then click on **SAVE** to save the tag.

Edit tag

<italic>

52	1 <bold> Study characteristics 1			
53	We found 27 studies that compared 5ARI to no treatment, herbal medications, so-called alpha-blockers that work by relaxing the prostate, or the combination of 5ARI and an alpha-blockers.			
54	We only included studies that treated men for at least six months.			
55	1 <bold> Key results 1			
56	Long and short term use of 5ARIs had little effect on urologic symptom, urinary quality of life and major adverse events compared to placebo, herbal medications, alpha-blocker and combination therapy.			
57	Compared to no treatment and alpha-blockers, it may lessen the risk of being unable to urinate and the need for surgery for an enlarged prostate when used long term.	Im Vergleich zu keiner Behandlung und zu 1 <italic> Alphablockern 1 kann es bei langfristiger Einnahme das Risiko von Hamdrang und die Notwendigkeit einer Operation bei einer vergrößerten Prostata verringern.	99	
58	We do not find any studies to answer the question how 5ARIs compare to surgery.			
59	1 <bold> Quality of the evidence 1			
60	We rated the quality of evidence for most outcomes as low to moderate, meaning that we do not completely trust the results.			
61	Translation notes CD011928.pub2
