

# Citation of updated Cochrane Reviews

Since April 2012, all updated Cochrane Reviews receive a new citation so that the wording of the abstracts is always consistent between the *CDSR* and MEDLINE and other databases; see [What's New events for Cochrane Reviews](#). This applies to all updated Cochrane Reviews because at the very least any update will include a new 'search date'. Citations to updates should be given even when a new search reveals no new trials, and when there are no edits made to the Cochrane Review apart from updating the search. Every time a Cochrane Review receives a new citation, the previously cited version is archived in the *CDSR* alongside the current version (see the review 'History' alongside the published Cochrane Reviews).
