

September update

Annotation Progress

Over 6700 completed annotations to date!

Status

A reminder of how we are using some of the status.

Unannotated

Q: Why is a review marked as *Not for Annotation* when in fact the authors have just published the full review?

A: I (Deirdre) have marked many older reviews and protocols that are not being annotated with this status. If you find any reviews that have this status but there is a published review, new or updated, please change the status and annotate.

Note: I continue to screen through the Unannotated in the QA dashboard:

- reviews that we are not annotating I have marked them *Not for Annotation*
- most protocols I have marked them *Not for Annotation*

Blocked

Please mark annotations as *Blocked* when you request a term to be added to vocabulary for

- Population/Condition
- Intervention

For outcomes request the term and mark the annotation as complete.

Please continue to submit your term requests via the form in [Confluence](#).
