1 Individualised gonadotropin dose selection using markers of ovarian reserve for women undergoing in vitro fertilisation plus intracytoplasmic sperm injection (IVF/ICSI)
2 During a stimulated cycle of in vitro fertilisation or intracytoplasmic sperm injection (IVF/ICSI), women receive daily doses of gonadotropin follicle-stimulating hormone (FSH) to induce multifollicular development in the ovaries.
3 A normal response to stimulation (e.g. retrieval of 5 to 15 oocytes) is considered desirable.
4 Generally, the number of eggs retrieved is associated with the dose of FSH.
