Complete

<input type="checkbox"/>	Name	Status	Due date	Wordcount	Progress	Project #	Project	Source	Target	Created
<input type="checkbox"/>	 CD001054.pub3.fr.xml	Accepted		1384	0%	429	CD001054.pub3 FR	en	fr	Mar 23 13:13

Alternatively, you can open the file in the web editor and change the status in the right-hand corner by clicking on "New" and then marking the job as "Accepted".

1	Individualised gonadotropin dose selection using markers of ovarian reserve for women undergoing in vitro fertilisation plus intracytoplasmic sperm injection (IVF/ICSI).		O	-				
2	During a stimulated cycle of in vitro fertilisation or intracytoplasmic sperm injection (IVF/ICSI), women receive daily doses of gonadotropin follicle-stimulating hormone (FSH) to induce multifollicular development in the ovaries.		O	-				
3	A normal response to stimulation (e.g. retrieval of 5 to 15 oocytes) is considered desirable.		O	-				
4	Generally, the number of eggs retrieved is associated with the dose of FSH.		O	-
